

Are you curious why we came up with the Griffin Vane?

At the Bohning Company, our goal is to make products that solve problems for the archer. We saw how much time and energy Olympic Recurve archers were spending re-fletching mylar vanes. We realized how difficult it was for many to re-fletch mylar vanes. Our solution: a durable vane requiring far fewer re-fletchings with performance as good or better than mylar vanes.

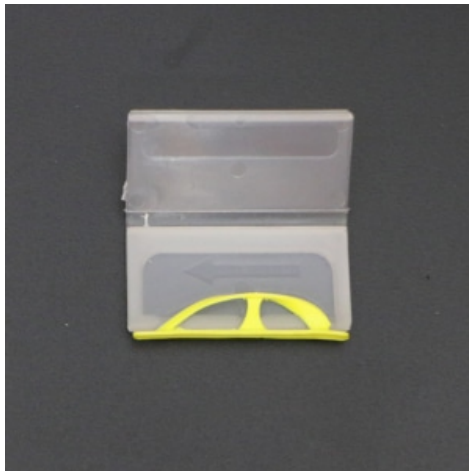

We began with several unique vane concepts, then conducted literally thousands of engineering computer simulations before moving to lab prototypes and field tests to identify the best concepts.

We tested factors such as drag, side and lift forces, yaw & pitch, multiple speeds and directions of winds to include crosswinds of variable and steady nature. We used these test results to determine

which vane design minimized outside influences such as lateral drift & over-correction resulting from wind gusts. After selecting the best vane concepts, we proceeded to fine-tune the design. Knowing materials impact flight, we tested multiple designs in dozens of different materials, finally identifying the “sweet spot” material, producing optimal durability and performance.

And that wasn't the end of it. After creating the perfect Olympic Recurve vane, we identified and established the best manufacturing processes and quality control procedures, ensuring the archer gets a consistently great vane. Next we produced a clamp insert (soon to be followed by a Griffin clamp) making it easy for archers to fletch the Griffin Vane either with a Pro Class Jig or by hand, and finally, we designed packaging that conveniently and securely stores the Griffin Vanes.

We at the Bohning Company would like to extend a special thanks to our test staff who field-tested the Griffin Vane during all of these testing stages, it would not have been possible without your

help.

"Hell YES! The Griffin Vanes are AWESOME in the wind! Even during the crazy east coast storms we've had, they performed perfectly. And they're super durable – now when I'm on the road, I don't have to spend my time re-fletching. Plus, the packaging is sweet – literally, it looks like a fancy chocolate bar, I love it." - Lee Ford, Team USA
